Access database engine 2010 64 bit

View Original X by: Support you are trying to install 64-bit Access Database Engine on your machine that is running 32-bit Microsoft Office (2007, 2010, or 2013) and you're getting an error message: You can't install the 64-bit version of Microsoft Access Database Engine 2010 because you now have 32-bit products installed... Cause: Microsoft does not support the side-by-side installation of the 32- and 64-bit Microsoft Office or dependent components. VIDEO DEMONSTRATIONWRIT INSTRUCTIONS: Solutions install 64-bit Access Database Engine 2010 on a computer with 32-bit Microsoft Office 2007, 2010, or 2013: Before you start, open the Registry Editor (type regedit in search box window under the Start menu and select regedit.exe) and check this registry key for the mso.dll value is not present in: HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Office\14.0\CommonFilesPaths This registry key value should be present if Microsoft Office 64-bit was installed on the computer, in which case you should be able to install access to 64-bit Engine without using this solution. Solution: 1. Open the command prompt by typing cmd in the Search Pane box under the Start menu and select cmd.exe 2. Type the file path and file name to access the 64-bit Data Access Engine 2010 installed file, followed by a space and /passive (this runs the installation without displaying any error messages). For example: 3. Open the Registry Editor by typing regedit in the Windows search box under the Start menu and select regedit.exe 4. Delete or rename the registry value mso.dll in the following registry key: HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Office\14.0\CommonFilesPaths NOTE: If you don't delete the mso.dll registry value, you'll get a Reconfiguring message each time you open up an Office application. You'll need to use this same solution to install Service Pack 1 for Motor Database Accesses 2010 for 64-bit product: AutoCAD, Civil 3D, AutoCAD Map 3D, Version: all. Get fast answers from Autodesk support staff and product experts at the forums. To use Microsoft Access and Excel data in TNTmips either Microsoft Office 2010 or the Microsoft Access Database Engine needs to be installed. Note, if Microsoft Office and/or Access is already installed you don't need to download/use the Microsoft Access Database Engine, however, you'll need to run TNTmips for the architecture (32-bit or 64-bit) consistent with those of the Microsoft product. Choose the correct download: If Microsoft Office and/or Access are not installed, download and install Microsoft Access Database Engine: microsoft.com/en-us/download/details.aspx?id=13255. When pushing, select one of the following files based on your Windows OS and TNTmips installation architecture: AccessDatabaseEngine.exe (32-bit) AccessDatabaseEngine_x64.exe (64-bit) Windows OS and TNTmips installation architecture: *32-bit Windows 32-bit TNTmips: Install 32-bit Microsoft Database Engine * 64-bit Windows 64-bit TNTmips: Install 64-bit Microsoft Access Database Engine 32-bit TNTmips: Install 32-bit Microsoft Access Database Engine Microsoft Access Database Access Engine 32-bit Redistribuable (64-bit) allows the transfer of data between existing Microsoft Office files such as Microsoft Office Access 2010 (*.mdb and *.acdb) files and Microsoft Office Excel 2010 (*.xls, *.xlsx, and *.xlsb) files of other data sources such as Microsoft SQL Server. Connection of existing text files is also supported. ODBC and OLEDB drivers are installed for application developers to use in developing applications and connections in Office file formats. This OLE DB provider is provided by Microsoft. The primary function of the provider is contained in the ACEOLEDB file. DLL. Set Provider=Microsoft.ACE.OLEDB.12.0 in the connection string to use this provider. Driver description was first released with Office 2007. It is possible to use Microsoft.ACE.OLEDB.12.0 to connect to old .xls (Excel 97-2003) workbooks as well. The driver is available in both 32 bit and 64 bit versions. Please note! Some issues reporting with Microsoft Access Database Engine 2010 Redistribuable packages that are similar to using Windows 64 bit with Office 64 Office 2010 or above. The reporting solution is to install the 2007 Office System Driver: Data Connection Components instead. Read more in this article. The Microsoft ACE OLEDB 12.0 provider can be used to connect to these data sources by using these connection string references: Microsoft Access Database Engine 2010 comprises a set of components that can be used in order to enable the communication and data exchange between files that are proprietary in the Office 2010 package and other applications. Its goal is to allow non-Office systems to transfer the data to and from Office files. For example, it can be used to allow Microsoft SQL Server to import data from existing Access database files (MDB or ACDB) or Excel worksheets (XLSX, XLSX, XLSB). Additionally, it supports the text file connection. Developers will be glad to know that the package also packages ODBC and OLEDB drivers, which work together in order to help them implement support for Office file formats in projects. To use this feature, you must configure the provider argument (ConnectionString property) during the installation process. Before installing the package, you are advised to remove any existing versions of the Access Database Engine from your computer, in order to avoid incompatible issues. Please note that this package cannot replace Jet and it is not a tool that you can use Office file editor. Microsoft Access Database Engine 2010 is able to assign applications reading and writing permissions for previously created documents with Microsoft Office Excel, Microsoft Office Access and text files. With its help, you will be able to easily transfer together big data Excel spreadsheet or Access database of SQL Server or other applications, without encountering any difficulties or problems during the importing operation.
